

## RUSHES – Retrieval of mUltimedia SemantiC units for enHanced rEuSability

The RUSHES project is presenting its fully integrated prototype demonstrator for automatic indexing, search and retrieval of rushes content. In Figure 1, the workflow of the RUSHES prototype demonstrator is presented.

**Figure 1 Workflow of the RUSHES system**

The visitors can explore the full functionality of the developed prototype system. It consists of the following components:

- the search interface for different kind of target users – home and professional
- the annotation tool for professional annotation of multimedia items
- several navigation and browsing tools for exploration of large video repositories
- audio-visual player for observing AV media

The demonstration is completed with a slide show on a second display, where the overall system concept and different modules are explained.
